Integrated DNA Technologies

Recycling Statement

- We recycle all paper and cardboard.

- All pop bottles and cans eligible for deposit are recycled.

- We comply with EPA regulations for recycling all light bulbs, computer monitors, and batteries.

- We strive to continually reduce the amount of hazardous waste generated in production by streamlining our synthesis platform to perform more efficiently.

- Our hazardous waste is reused as fuel for a cement kiln so it has a secondary lifespan.

- Our loop water systems has reduced the amount of water used as previous filtration systems wasted water for back-flushing and used filters that could not be recycled.
