

RECYCLING, SUSTAINABILITY AND GREEN INITIATIVES

SMARTSolution Technologies does not currently have a formal program in place related to Green initiatives, and does not presently have a timetable for such. We do, however, very much recognize the importance of responsible consumption and recycling practices in our business operations. Inasmuch, we have numerous, more informal examples of our attempt to be part of the “SMARTSolution”.

We actively recycle business paper and publications through a local church-sponsored program.

We are actively reducing the internal use of copy paper and ink/toner products.

We purchase remanufactured ink/toner cartridges and paper with recycled content.

We are actively reducing the use of disposable plastic products internally.

We have installed programmable thermostats on our HVAC systems to reduce energy consumption.

When upgrading office equipment, we purchase Energy Star compliant devices.

As the manufacturers whose products we represent begin to offer green and environmentally friendly items, we will endeavor to introduce and offer for sale such products to the University buying community.

Any questions pertaining to our efforts can be directed to Steve Acri at the number below.
